Native scores versus known coupling: original uniform records
PCMCI+ — Linear
LKIF — Linear
CCM — Linear
GC — Linear
PCMCI+ — Nonlinear
LKIF — Nonlinear
CCM — Nonlinear
GC — Nonlinear
Max. GPDC statistic
Max. |normalized information flow|
Original Tp=0 skill (rho)
Log residual variance ratio
True model gain K
True direction: X → Y
Reverse: Y → X
Retained direction
Original test not significant
CCM lag incompatible
Unresolved evidence
CCM lag failed; score retained
Each line follows one paired realization. CCM keeps rho0 for every successful original fit, including unresolved or failed lag checks. Scores do not estimate K.
