Four chronology-uncertainty levels
C/L/E increase SD; J increases affected duration at fixed 10-year peak SD
C: constant SD
L: linear increase
E: fixed exponential shape
J: more fixed-height intervals
Input age SD (years)
Age (kyr BP)
Level 1: peak SD 10 yr
Level 2: peak SD 20 yr
Level 3: peak SD 40 yr
Level 4: peak SD 80 yr
Level 1: 1 peak (10%)
Level 2: 3 peaks (30%)
Level 3: 5 peaks (50%)
Level 4: 7 peaks (70%)
J intervals are 2.8 kyr wide; coverage is their total width / 28 kyr. SD is not an error bound, and levels do not imply equal total uncertainty across types.
